KiSSySoft MACROs Editor is a straightforward Windows tool that lets you automate repetitive tasks using macros. A Macro is a block of code that can be saved as a file and easily reused across different programs or projects. Usually, these blocks of code are associated with a keyboard shortcut or a menu item. The program has two windows. The first one is the one you should use for editing. It lets you select any text within a file or a specific line, without the need to select each character separately. It also lets you enter a file path, and select text inside files or folders. Once the block of code is recorded, you can then edit the results in the second window. The controls let you use any text or programming language, and let you move text with arrows or insert spaces and tabs. There's even a button to toggle between the text preview and the original source. Multiple languages Macros are recorded in files with a.kmc extension. Multiple languages can be used for the text editor, and in fact, there's even a translation feature. Saving and importing You can save each macro as a separate file, and easily export them. However, when importing them back, you can also use a search filter that lets you exclude files or folders from being loaded. There are no other functions. By default, the program loads only the files that have been saved. Basic functionality and simplicity All records appear in a list of files and folders, and can be easily sorted. Overall, KiSSySoft MACROs Editor is a great way of automating tasks, and making it a lot easier. However, there aren't many controls, and if you want more functionality, you can use another program. Dell XPS 8200 (9 Laptops) Deals Microsoft Remote Desktop Every device of a computer system can be controlled remotely and this can be done with no technical knowledge needed. Through the use of software application, user can use their keyboard, mouse and monitor through a remote connection. This way user can access the system through a wireless connection and use the computer system with a remote desktop. The most common form of this software application is Microsoft remote desktop. Microsoft Remote Desktop software supports a wide range of platforms such as Windows and Mac OS X. This software application can be used to access remote desktop session from anywhere. If the user is away from the office

What's New In Time-Keeper?

Time Keeper is an application that allows you to keep track of the hours spent at work, that calculates and saves them in the database. The main window features a countdown timer, a stopwatch and a checkbox with three options, that you'll soon use. 1) You can use the first one to enter the hours you'll work in the next two weeks, and the two weeks that follow. You can save up to 3 jobs and you can input data for a day, week or month. 2) You can use the second one to enter the number of hours that an individual has to work. The selected user has a checkbox in the side bar, and it allows you to add more hours for a certain user, if you want. 3) The third option lets you enter hours for all users. The application displays the hours in the tabbed bar, and the data are also saved in a database. The data are sorted by user and by date, and you can easily export them in HTML, XML, CSV and Microsoft Access formats. I recommend that you play with the application and explore its features, because it has some interesting ones, and it's a fairly good job tracker, but not a professional application that you can simply use for your business purposes. What we liked: Extremely easy to use. Easy to create, modify and import data. The options menu lets you view, edit or add items to the list. What we didn't like: The database and file exporting tools could be improved. The list of data can be sorted by a different category, but there are no tools to work with it.

Date&time: Time Keeper is an application that allows you to keep track of the hours spent at work, that calculates and saves them in the database. The main window features a countdown timer, a stopwatch and a checkbox with three options, that you'll soon use. 1) You can use the first one to enter the hours you'll work in the next two weeks, and the two weeks that follow. You can save up to 3 jobs and you can input data for a day, week or month. 2) You can use the second one to enter the number of hours that an individual has to work. The selected user has a checkbox in the side bar, and it allows you to add more hours for a certain user, if you want. 3) The third option lets you enter hours for all users. The application displays the hours in the tabbed bar, and the data are also saved in a database. The data are sorted by user and by date, and you can easily export them in HTML, XML, CSV and Microsoft Access formats. I recommend that you play
